P01	Section 38	16/11/2022	A.McCarthy				

**We are Cork.**

## **1 Executive Summary**

This Environmental Impact Assessment (EIA) Screening Report has been prepared to consider the requirement or otherwise of carrying out an EIA in respect of the proposed upgrade of the existing Zebra crossing to a raised Zebra crossing on Grattan Street, Cork City.

This screening exercise was undertaken in two stages. The first stage considered the need for a mandatory EIA, while the second stage considered the need for a sub-threshold EIA. As part of the sub-threshold screening exercise, the potential for impacts on environmental sensitivities was considered in addition to the interrelationship between those environmental sensitivities. Following on from this, the formal EIA Screening Exercise was completed, having regard to the criteria set out in the Roads Act, as amended and in the EIA Directive (2014/52/EU).

This report concludes that this is a sub-threshold type project which is not likely to have a significant effect on the environment, either by itself or in combination with other plans or projects, and that an Environmental Impact Assessment (EIA) is not required in this instance.

## 2 Legislative context

EIA legislation sets down the types of projects that may require an EIA. Annex I of Directive 2011/92/EU, as amended by Directive 2014/52/EU defines mandatory projects that require an EIAR (EIS) and Annex II lists projects which can be subject to case-by-case analysis or thresholds to be determined by member states.

## 3 Mandatory requirements

The proposed scheme has been assessed in terms of the mandatory requirement for an EIA based on the nature or scale of the development, as addressed in the EU Directive 2014/52/EU and also the Roads Acts 1993 - 2016. It is considered that the proposed scheme is not one which falls within the scope of this category. It should be noted that mandatory EIA requirements for non-road type development have also been considered and discounted in this instance as part of this infrastructure type projects listed in the Planning and Development Regulations 2001, as amended and in Annex I and II of the EIA Directive as amended were considered.

## 4 Sub-threshold requirement for an Environmental Impact Statement

### Legislative context and screening methodology

While the mandatory requirements for EIA for road schemes are straight forward, being based on type and scale, the discretionary (or sub-threshold) requirements are based on an assessment of the likely significant environmental effects of the proposed road development. Where a proposed road development would be located on certain environmental sites the road authority shall decide whether the proposed road development would be likely to have significant effects on the environment. The key issue, in the context of the possible need for EIA of sub-threshold development, is whether such development is likely to have significant effects on the environment.

The 2014 amending EIA Directive (2014/52/EU) contains guidance for Member States in terms of deciding whether a development is likely to have “significant effects on the environment”. The guidance is provided by way of criteria set out in Annex III of the Directive. The criteria are grouped under three headings and are used to help in the screening process to determine whether a development is likely to have a significant effect on the environment. The criteria for determining whether a development would or would not be likely to have significant effects on the environment are taken from Annex III of the Directive and are grouped under the following three headings:

1. Characteristics of proposed development
2. Location of proposed development
3. Characteristics of the potential Impacts

### Sub threshold development assessment

The aim of the following section is to address likely impacts, if any on the environment by the implementation of the proposed development having regard to the criteria set out in the EIA Directive, as amended. Criteria for determining whether the project would or would not be likely to have a significant effect on the environment as per the requirements of Article 120 of the Planning and Development Regulations 2001 and subsequent amendment 2011.

<b>1. CHARACTERISTICS OF PROPOSED DEVELOPMENT</b>	
Size of Proposed Development	<p>The development will consist of the upgrade of the existing Zebra crossing on Grattan Street, 50m north of its junction with Sheares Street. The works will comprise of the following:</p> <ul style="list-style-type: none"> <li>• Construction of a flat top speed ramp at the realigned crossing location</li> <li>• Installation of flashing amber Belisha beacons, with associated electrical system,</li> <li>• Alterations to the footpaths at either side of the crossing,</li> <li>• Ancillary improvements such as: replacement and additional road markings, road traffic signage, public lighting, and road drainage will also be implemented where necessary.</li> </ul>
Cumulation with other Proposed Development	<p>The scheme will be in existing urban environment and will be confined to the existing road alignment and be limited in scale and extent. While other developments may be ongoing in the surrounding areas such as residential and commercial developments, those developments and the current scheme will not have any significant impact or connection with each other.</p>
Use of Natural Resources	<p>The use of natural resources will be limited to the materials used in the construction works. Anticipated materials include stone, aggregate and asphalt which will generally be provided on a like for like basis with the material to be replaced.</p>
Production of Waste	<p>Waste production will be limited to the construction phase and will consist of general excavated inert material (stone, aggregate, bituminous materials, topsoil) and will be disposed of at local licensed facilities.</p>
Pollution and Nuisances	<p>This development will not result in an increase in either pollution or nuisance.</p> <p>During the construction stage, the likelihood of an accidental spillage of construction materials into the aquatic environment will be managed through the adoption of best practice construction environmental management.</p> <p>Enhanced facilities for pedestrians should ultimately reduce the nuisance associated with use of private vehicles in this location.</p>
Risk of Accidents	<p>The goal of the development is improved road safety at the location by provision improved pedestrian facilities.</p> <p>The risk of accidents during the construction stage will be minimised through implementation of a Construction Safety and Health Plan including Temporary Traffic Management.</p> <p>Consequently, the potential for accidents will be reduced in both the short and long term.</p>

<b>2. LOCATION OF PROPOSED DEVELOPMENT</b>	
Existing Land Use	The footprint of the Project will be within the existing bounds of public road and footpath alignments. There will be no change in land use.
Relative Abundance, Quality and regenerative Capacity of Natural Resources in the Area	The scheme will have no significant impact on the quality and regenerative capacity of natural resources in the area. All construction material will be imported for the construction of the Project.
Absorption Capacity of the Natural Environment	<p>There is not likely to be any significant negative impact on road users because of the scheme. Construction will be for a short duration and will not significantly impede traffic flow in the areas concerned. During operation it is intended that the proposed scheme will lead to improved road safety, with pedestrians benefiting from the improved pedestrian facilities in particular.</p> <p>Preventative measures will be implemented during and post construction to reduce the risk of pollution to surface waters.</p> <p>It has been concluded that the Project does not have the potential to impact, either directly or indirectly, the Qualifying Interests or Special Conservation Interests of any European site. Consequently, there will be no adverse impacts on the Conservation Objectives of any European sites as a result of the Project.</p>

<b>3. CHARACTERISTICS OF POTENTIAL IMPACTS</b>	
Extent of the Impact	The primary impact will occur during the construction phase which is short term.
Transfrontier nature of the Impact	N/A
Magnitude and Complexity of the Impact	<p>Minimal</p> <p><b>Air Quality &amp; Climate</b></p> <p><u>Operation Phase:</u> The objective of the project is improved road safety at the location for all road users. The proposed improvements will benefit pedestrians in particular. The improved pedestrian facilities may have some potential towards the displacement of motor vehicles and in this manner, may contribute a very modest improvement in air quality and climate in the immediate locality.</p> <p><u>Construction Phase:</u> The level of construction traffic required for a project of this scale will not have any significant negative impact on the local air quality or climate; neither will a road improvement project of this scale result in any significant generation of dust.</p> <p><b>Noise &amp; Vibration</b></p> <p><u>Operational Phase:</u> Lower vehicular speeds and improved pedestrian facilities at the scheme locations will likely have a mild positive impact on noise or vibration in the local environment.</p> <p><u>Construction Phase:</u> Works will be carried out in compliance with BS5228: Part 1 and the European Communities (Noise Emission by Equipment for Use Outdoors) Regulations, 2001. This will ensure a controlled level of noise during construction phase. The level of construction traffic and construction operations required for a relatively short term project of this scale will not result in the creation of any significant negative impact through noise and vibration.</p> <p><b>Hydrology</b></p> <p><u>Operation Phase:</u> The existing drainage will be maintained and the proposed development will not increase or alter the quantity of surface water discharging to the receiving bodies.</p> <p><u>Construction Phase:</u> Runoff from the site will continue to be collected by the existing road drainage systems which will not be significantly affected by the works. Where necessary, appropriate measures will be implemented to prevent any deleterious materials such as oils or cement from entering the drainage system.</p> <p><b>Biodiversity</b></p> <p>Having regard to the location, nature and size of the proposed development, it there are no anticipated effects on biodiversity during either construction or operations phases.</p>

<b>3. CHARACTERISTICS OF POTENTIAL IMPACTS</b>	
	<p><b>Archaeology, architecture, cultural heritage</b></p> <p><u>Operational Phase:</u> There are a number of recorded monuments and protected structures in Cork City. However, none of the proposed road improvement schemes are located close to any protected structure. The proposed schemes are located wholly within the bounds of existing road and footpath alignments. Therefore, there will be no significant impact on any archaeology, architecture or cultural heritage.</p> <p><u>Construction Phase:</u> Presence of plant and machinery may temporarily detract from certain views. However, this will be a very mild negative short-term impact and is easily offset by the benefits accrued from improved road safety at the operational stage. To mitigate against any potential negative impact on structures associated with vibration, the works will be carried out in compliance with BS 5228:2009 “Code of Practice for Noise &amp; Vibration Control on Construction and Open Sites.</p> <p><b>Visual Amenity</b></p> <p><u>Operation Phase:</u> The Project is located wholly on existing roads and footways and is unlikely to have any significant negative impact on the landscape of the area. The improvement of footpath and road surfaces may contribute a modest improvement to the visual amenity of the streetscape in the vicinity of the site.</p> <p><u>Construction Phase:</u> Presence of plant and machinery may temporarily detract from certain views. However, this will be a very mild negative impact which is short-term and easily offset by the benefits accrued from improved road safety at the operational stage</p> <p><b>Overall</b></p> <p>Environmental impacts associated with the proposed development will be minor and short-term and, therefore, significant environmental effects can be ruled out without the necessity for further surveys, investigations, and assessments.</p>
Probability of the Impact	<p><b>Low</b></p> <p>During the construction stage, noise nuisances and air pollution may occur over a short duration.</p>
Duration, Frequency and Reversibility of the Impact	<p>Potential impacts are limited to the construction phase</p> <p>These impacts will be temporary, reversible and one-off.</p>

## 5 Screening Assessment Conclusion

### SCREENING CONCLUSION STATEMENT

Having regard to the contents of Article 120 of the Planning and Development (Amendment) (No. 3) regulations 2011 and Schedule 7m of the Planning and Development Regulations 2001, this screening concludes that this project, by reason of its nature, scale and location is not likely to have a significant negative effect on the environment, either by itself or in combination with other plans or projects, and that an Environmental Impact Assessment (EIA) is not required in this instance.

## 1. EUROPEAN SITE DATA

<b>Great Island Channel Special Area Of Conservation (site code 001058)</b>	
Conservation objective	To maintain or restore the favourable conservation condition of the Annex I habitat(s) and/or the Annex II species for which the SAC has been selected.
Qualifying interests	Annex I listed habitats: mudflats, sandflats not covered by seawater at low tide, estuaries, spartina swards, Atlantic salt meadows.
References and further information	Conservation Objectives for Great Island Channel SAC [001058] (NPWS), Natura 2000 Standard Data Form (NPWS), Site Synopsis Great Island Channel Site Code 001058 (NPWS) (see <a href="http://www.npws.ie">www.npws.ie</a> for further details)

<b>Cork Harbour Special Protection Area (site code 004030)</b>	
Conservation objective	To maintain or restore the favourable conservation condition of the bird species listed as special conservation interests for this SPA.
Qualifying interests	Annex I-listed bird species: bar-tailed godwit, common tern (breeding), golden plover, ruff, whooper swan. Other birds of special conservation interest include black-headed gull, black-tailed godwit, common gull, curlew, dunlin, great crested grebe, grey heron, grey plover, lapwing, lesser black-backed gull, little grebe, oystercatcher, pintail, red-breasted merganser, redshank, shelduck, shoveler, teal, and widgeon. This site is an internationally important wetland site supporting > 20,000 wintering waterfowl.
References and further information	Conservation Objectives for Cork Harbour SPA [004030] (NPWS), Natura 2000 Standard Data Form (NPWS), Site Synopsis Cork Harbour SPA Site Code 004030 (NPWS) (see <a href="http://www.npws.ie">www.npws.ie</a> for further details)

## 2. DETAILS OF PROPOSED DEVELOPMENT

Reference no.	Proposed Zebra Crossing Safety Improvement Works
Development consent type	Section 179 of Planning & Development Acts 2000-2021 Local Authority own development
Development location	At existing Zebra crossing on Grattan Street, 50m north of its junction with Sheares Street
Description of development	The development will consist of the upgrade of the existing Zebra crossing on Grattan Street, 50m north of its junction with Sheares Street. The works will comprise of the following: <ul style="list-style-type: none"> <li>• Construction of a flat top speed ramp at the realigned crossing location</li> <li>• Installation of flashing amber Belisha beacons, with associated electrical system,</li> <li>• Alterations to the footpaths at either side of the crossing,</li> </ul> Ancillary improvements such as: replacement and additional road markings, road traffic signage, public lighting, and road drainage will also be implemented where necessary.
Distance from SAC	Approximately 9.7km
Distance from SPA	Approximately 3.4km
Relevant strategies or policies	Cork City Development Plan 2022-2028 Road Safety Strategy 2021-2030
EIAR submitted?	No
Screening report/NIS submitted?	Yes

### 3. ASSESSMENT OF LIKELY DIRECT, INDIRECT AND CUMULATIVE EFFECTS

Yes / No

1. Is the proposed development directly connected to or necessary for the conservation management of the SPA and/or SAC? <i>(If yes, no further assessment required. If no, screening required.)</i>	<b>No</b>
2. Is the proposed development located within or partly within the SPA?	<b>No</b>
3. Is the proposed development located within 100m of the SPA?	<b>No</b>
4. Does the proposed project involve the development, extension or upgrade of a cycleway or walkway within 200m of the SPA?	<b>No</b>
5. Does the proposed development involve development in the intertidal or coastal zone within the potential impact zone of the SPA?	<b>No</b>
6. Could the proposed project increase the level of recreational or other use of marine or intertidal areas within the potential impact zone of the SPA?	<b>No</b>
7. Does the proposed development involve the excavation of previously undeveloped land within an area that has been identified to be at risk of flooding within the potential impact zone of the SPA?	<b>No</b>
8. Does the proposed development involve the removal of significant amounts of topsoil within 100m of the SPA?	<b>No</b>
9. Does the existing wastewater treatment system have the capacity to treat any additional loading?	<b>N/A</b>
10. Would the proposed development result in direct surface water or other discharge to water bodies in or feeding into the SPA or SAC?	<b>No</b>
1. <a href="#">Would it result in additional storm flows into a combined sewer and subsequently into a combined sewer overflow (CSO), resulting in increased frequency, quantity and/or duration of overflow from the CSO to watercourses feeding into the European sites?</a>	<b>No</b>
11. Would the proposed development involve dredging or could it result in the mobilisation of marine sediments in the Harbour area?	<b>No</b>
12. Could the proposed development give rise to increased risk of oil or chemical spillage or leaks within the marine environment or watercourse within the potential impact zone for the SPA or cSAC?	<b>No</b>
13. Are there relevant plans or projects which, in combination with the proposed development, are likely to give rise to any cumulative effects?	<b>No</b>
<p><b>Comments or notes</b></p> <p>Q.9 No wastewater loading associated with this project.</p> <p>Q.10 Any surface water will be collected, as is currently the case, in the existing road drainage system.</p>	

#### 4. SCREENING CONCLUSION STATEMENT

*In view of the above it is considered that (tick one box only):*

- Appropriate Assessment is not required**  
 The proposed development is directly connected / necessary to the conservation management of a site.
- Appropriate Assessment is not required**  
 It can be excluded through screening that the proposed development will have significant effects on the sites.
- Further information is required**  
 Potential impacts have been identified through initial screening and/or there is insufficient information to enable the planning authority to screen out impacts, but on balance it is determined that the issues could be resolved through minor modifications to the proposed development or by appropriate conditions. The information required is specified below.
- Appropriate Assessment is required**  
 Significant issues have been identified and/or significant effects are certain, likely or uncertain, and the submission of a Natura Impact Statement (NIS) is required, or the proposed development must be rejected.

**Further information required / Comments or Notes**
